

Product Specification

Blue Heeler 813945M | 813945W

Description

11-inch calf height Western boot.

Upper Materials

Premium full-grain cowhide waterproof leather upper and double stitched in nylon thread.

Toe Cap

The Ergo-Defender™ Square Toe offers a wide toe box allowing your toes to spread, ensuring improved foot comfort. ASTM F2413 M I/75 C/75 EH.

Lining Materials

This boot is lined with Baltico®, which is a soft, non-abrasive, hydrophobic material that wicks perspiration away from the foot, enabling the skin to remain cool and dry.

Insole

A full-length extra thick Ortho Rebound® flexible anti-bacterial insole. Inserted into the footwear to offer additional support and comfort. This insole is made from soft polyurethane that will retain its shape and thickness throughout the life of the boot. The S-shaped “auxetic” design in the heel reduces shock and absorbs impact.

Midsole

Directly molded Polyurethane midsole for greater shock absorption.

Outsole

Non-conductive Thermoplastic Urethane (TPU) outsole for superior wear properties. Heat resistant to 266°F.

Elastic Gusset

For easier on and off, the Steel Blue - Blue Heeler features a waterproof elastic gusset on the inside of the leg seam. This reduces stress on the materials and improves foot entry for ultimate comfort.

Superior Underfoot Comfort

The Steel Blue Trisole® Comfort Technology system is a three density soling system that offers a high level of comfort, shock absorbency and energy return. The system uses PORON® as energy absorbing pads under the pressure points of the foot to give the wearer superior comfort and offers similar shock absorbency and comfort to sports footwear.

Footwear marked as EH has been tested and shown to withstand the application of 18,000 V at 60 Hz for a period of 1 minute with no current flow or leakage in excess of 1.0 mA in dry laboratory conditions. This footwear is not suitable where static-dissipative properties are needed.

Note

EH Series footwear is intended for use as secondary protective personal equipment. It is to be used in conjunction with primary protective equipment in areas and environments where there is a need to reduce the risk of electric shock due to accidental contact with live electric wires.
